

Reuse that pays every month.

We give the phones, TV boxes, laptops and routers a city no longer uses a second job, as cameras, Wi-Fi, private clouds and school labs, and charge monthly to run them. Starting with Dhaka's apartment buildings.

Problem

Working devices sit in drawers or get thrown away: Bangladesh produced 367M kg of e-waste in 2022. The ones left plugged in and never updated get hijacked: BADBOX 2.0 took over 1M+ home devices (FBI, 2025).

The gap

Reuse today ends at one transaction. Repair shops resell once, recyclers shred, IT disposal firms wipe and resell. Nobody *runs* reused devices for anyone.

Product

- Collect, wipe (NIST SP 800-88 guidance), rebuild on open software, install, look after
- Recipes: phone → camera, TV box → private cloud, router → Wi-Fi, tablet → notice screen, laptop → lab machine or server
- Encrypted network between members; every device has a passport

Model: paid at both ends

Companies pay per device to retire them (~Tk 500 per laptop). Buildings, homes, shops and schools pay monthly (from Tk 299; Tk 2,500 + Tk 199 per flat for a building). Supply is donated or paid for, so hardware cost is close to zero. On top sits a marketplace: members rent out idle storage and computing, and we keep 30–40%. For public bodies: fixed-fee right-size reviews, then reused devices processed to government standards.

Market

US\$94–103B
refurbished electronics,
2024–25

US\$17–21B
IT asset disposition,
2025

170M
people in
Bangladesh;
10.3M in Dhaka
city

Why Dhaka first

- Apartment buildings: one committee decision, many customers
- bKash and Nagad make small subscriptions normal
- Personal Data Protection Act 2026 makes local data and proper wiping a legal question
- Low-power devices ride out load-shedding on existing mini UPS units

Unit economics (pilot hypotheses)

A 30-flat building with 10 flats joined: Tk 4,490 revenue, ≈ Tk 2,600 contribution per month. Retirement fee about 2× its cost. Single homes are thin, so they come in through their buildings.

Milestones

Jan–Feb 2027
Bench
40 devices, 5
recipes

Mar–May
Pilot
2 buildings, 1
school lab

Jun–Sep 2027
Launch
500 devices

Early 2028
Expand
Second city

Raising [US\$___ pre-seed] for the Dhaka launch

[Team: founder name and one line on background.] Use of funds: technicians and installs, bench and tooling, platform, legal and compliance.
